5. ——— Ensure that soil erosion and sedimentation control measures and stormwater runoff control practices are incorporated into the site planning and design process, and are implemented and maintained;
6. ——— Encourage the use of Low Impact Development practices such as reducing impervious cover and the preservation of green space and other natural areas, to the maximum extent practicable;
7. ——— Comply with state and federal statutes and regulations relating to stormwater discharges and establish regulations and decision-making processes in Rockport to accomplish this;
8. ——— Establish the town of Rockport as the legal authority to ensure compliance with the provisions of this by-law and associated regulations through inspection, monitoring and enforcement.
9. ——— Establish provisions for the long-term maintenance of structural stormwater control facilities and non-structural stormwater management practices to meet the permit criteria, including adequate funding mechanism, including surety. For proper review, inspection and long-term maintenance.

Section 6. Exterior Residential Dwelling-Lighting (Added ATM 03/24/01, Amended 9/11/2017)

~~A. Purpose~~

~~The need for exterior lighting is widely recognized. Used properly it increases safety, helps provide security, and can enhance the Town's nighttime character. New technologies have produced extremely powerful lights. Unless used properly, they can produce excessive glare and light trespass. Glare is a safety issue. Light trespass is a privacy issue. Exposure to artificial blue light is a health, safety and environmental issue. Regulating exterior lighting will benefit the ability of Rockport citizens and visitors to better view the nighttime sky.~~

a. Definitions

(i) Color temperature (of a light source): The temperature at which an opaque and non-reflective object will radiate light of a color comparable to that of the light source. Color temperature is expressed in ~~degrees Kelvin (°K)~~ **Kelvins (K)**. Light sources with higher color temperatures contain more blue light than light sources with lower color temperatures, and appear brighter to the human eye, all other conditions being equal.

Direct Light: The light emitted directly from the light source, off the reflector or reflector diffuser, or through the refractor or diffuser lens of a luminaire.

(ii) Floodlight: A broad-beamed high-intensity luminaire.

Foot-candle (FC): A measurement of the luminance reaching an object. One foot-candle equals one lumen per square foot.

(iii) Full-cutoff (fully shielded): A luminaire that is constructed, and installed so that no light is emitted at any angle above a horizontal plane passing through the lowest light emitting part (including refractors, reflectors, **translucent panels**) of said luminaire to a point five (5) feet above grade at the property line as might be viewed at that height by an observer standing at that place. **Clear panels that scatter light, such as seeded glass, are considered refractors. Only opaque non-reflective, and clear non-scattering, materials are not considered light-emitting parts.**

(iv) Glare: A visual sensation caused by excessive and uncontrolled brightness. Glare is a function of the color temperature of the light source.

Illuminance: A measure of how much incident light strikes a surface, measured in foot-candles.

(iv) Light source (also referred to as a "bulb" or "lamp"): The component of a luminaire which produces light.

Light pollution: An unwanted consequence of outdoor lighting. It includes such effects as sky glow, light trespass, and glare.

(v) Light trespass: Illumination from a luminaire being cast where it is neither wanted nor needed, going beyond the lot lines of the lot on which the luminaire is located, at a level greater than the ambient illumination level as measured at the lot line in a horizontal and vertical plane.

Lumen: The measurement of the direct light emitted by its source. For the purposes of this section, the lumen output of a luminaire shall be the initial

lumen rating listed by the light source data sheet when operated at its rated conditions.

(vi) Luminaire: A complete lighting unit, consisting of light sources, ballast (when applicable), and any part designed to distribute the light, position the unit, protect the light sources (housing), and connect to the power supply. **Spotlights and floodlights which are further defined are included in this general definition as well.**

Luminance: The amount of light that passes through, is emitted from, or reflected from a particular area, and is thus an indicator of how bright a surface or light source will appear.

(vii) Motion detector (also referred to as a “motion sensor”): Any electronic device capable of detecting physical motion within the environment being monitored. For the purposes of this Bylaw, said motion detector shall be used to trigger one or more luminaires into operation and to maintain it or them in the illuminated state for a preset time interval, after which said illumination shall be extinguished.

Residential dwelling: A structure or part of a structure that is used as a home or residence by one or more persons who maintain a household, whether single family, multifamily, or mixed use.

(viii) Spotlight: A high-intensity luminaire projecting a sharply focused beam of light.

b. ~~C.~~ Exterior Residential-Lighting Regulations

The regulations set forth below shall apply to all exterior residential luminaires unless otherwise exempt under subsection c hereinafter set forth:

- ~~1) Temporary holiday lighting is exempt from these regulations.~~
- i) All **luminaires** shall emit a steady and constant light while powered on **unless exempt under subsection c.**
- ii) **Luminaires** shall be full-cutoff design.
- iii) All **luminaires** and light sources shall not exceed two thousand seven hundred fifty (2,750) K color temperature.
- iv) Luminaires shall be oriented such that light trespass will not occur beyond all adjacent property lines.

- ~~2) Luminaires shall emit a steady and constant light while powered on~~
- ~~3) Existing full cutoff designed luminaire light sources shall not exceed 3,000 °K color temperature.~~
- ~~4) Other existing luminaire light sources shall not exceed 2,750 °K color temperature~~
- ~~5) Existing floodlights or spotlights shall be of full cutoff design.~~
- ~~6) New luminaires and replacement luminaires must be of full cutoff design and their light sources shall not exceed 2,750K color temperature.~~
- ~~7) Luminaires shall be oriented such that light trespass will not occur beyond all adjacent property lines.~~

c. ~~D.~~ Compliance Exemptions from these regulations

- i) Temporary holiday lighting is exempt from these regulations.**
- ii) Existing luminaries which are not in compliance with subsection b as of its effective date 9/11/2017 shall nevertheless be considered in compliance so long as said:**
 - a. luminaries are fully shielded, and do not exceed 3,000 K; or**
 - b. other exterior luminaires other than floodlights and spotlights (to which this exemption does not apply), are also exempt if they conform with either of the following alternative requirements:**
 - i. Remains extinguished between the hours of 11:00 P.M. and 5:00 A.M.**
 - ii. Only operate for five (5) minutes maximum and only when triggered by a motion detector.**
- iii) When said existing luminaires and light sources are replaced, they must be updated to comply with subsection b of this by-law.**

- ~~1. These regulations set forth in subsection C shall apply to all exterior residential luminaires.~~
- ~~2. Existing luminaires which are not in compliance with subsection C as of its effective date shall nevertheless be considered in compliance as long as said:~~

~~luminaires are fully shielded,
and~~
